Migration Assessment Protected Content

How a migration assessment treats protected or encrypted content, and who is authorized to send an application.

This page applies to every application sent for a Migration Assessment.
Read it before you send.

Protected Parts of an Application
What Tatsoft Does With Protected Content
Authorization to Send an Application

Protected Parts of an Application

Some HMI and SCADA products let the author protect parts of an application. In some applications, displays, symbols, scripts or whole areas are encrypted or locked with a password.

What Tatsoft Does With Protected Content

Tatsoft does not open, decrypt or bypass protected content.

Content left protected stays outside the assessment.

Authorization to Send an Application

The sender is the owner of the application, or a person the owner has authorized to send it.
