Migration Assessment

Request a written assessment of an existing HMI or SCADA application before you plan its migration to FrameworX.

Tatsoft reads your existing HMI or SCADA application and returns a written report.

Tatsoft migrates the complete application for you, starting with a free evaluation.

This page does not cover upgrades from earlier FrameworX or FactoryStudio versions. See Upgrading Solutions Reference.

What the Assessment Is

Tatsoft reads the application object by object: tags, PLC addressing, alarms, history and every screen. The result is a written report.

The assessment describes your application. It does not convert it.

Which Applications

Any HMI or SCADA application, on any platform and in any version, including InTouch, Ignition, iFIX and FactoryTalk.

What to Send

Send a screenshot, a P&ID (piping and instrumentation diagram) or an application export.

To cover the complete application, the export includes:

- The tag database export
- The screen or window files
- The scripts
- The alarm configuration
- The historian or logging configuration
- The device or I/O server configuration

Nothing is installed on your system and nothing running is touched.

Some applications contain protected or encrypted parts. Read Migration Assessment Protected Content before you send. The same page states who is authorized to send an application.

How to Send It

Use the **Send your application** form at tatsoft.com/migrate-to-frameworx, or write to support@tatsoft.com. The form accepts files up to 20 MB.

For a larger application, send a download link to support@tatsoft.com, or contact Tatsoft at the same address.

What You Get

A written report. Tatsoft reads your application back to you object by object: tags, PLC addressing, alarms, history and every screen.

The report comes with a written fixed price for the migration.

Timeline

Tatsoft returns the written report in two to five working days.

This is the time to deliver the report. It is not an estimate for the migration.

Price

The assessment is free. The migration is a fixed price quoted from the assessment, and you pay only if you accept the result.

Confidentiality

Everything you send is held in confidence, never used for marketing or sales, and not shared outside Tatsoft unless you ask us to involve your integrator. We use it to produce your report, to fix the issues you find in your migration, and to improve the Tatsoft migration tools. As those tools improve, the improvements also reach your application.

Importers in the Product

FrameworX does not include a converter for applications built in other products. The import wizards under **Solution Import Tags** bring in tag lists and other data; they do not migrate an application. See Solution Import Tags Reference for the list of wizards.

The complete migration is carried out by Tatsoft and starts with the free evaluation.
